San Francisco

The purpose of CARE is to address the gap and reduce disparities in research participation among Asian Americans, Native Hawaiians, and Pacific Islanders (AANHPI) through the creation of a research registry of AANHPI who are interested in participating in various types of research.

## WHO CAN PARTICIPATE?

To be eligible for CARE, you must:

- Self-identify as Asian American, Native Hawaiian, or Pacific Islander
- 18 years old or older
- Can speak English, Mandarin, Cantonese, Vietnamese, Korean, or Samoan
- Can read English, Simplified Chinese, Traditional Chinese, Vietnamese, Korean, or Samoan
- Reside in the United States (US) or U.S. Associated Pacific Islands (USAPI)
- Have an interest in participating in potential research.

CARE aims to increase Asian American, Native Hawaiian, and Pacific Islander participation in research involving prevention, intervention, and treatment of cognitive decline, Alzheimer's disease and related dementias. We also seek to increase AANHPI participation in other aging-related health concerns including health issues, risk and protective factors that begin in early to mid-life; and, the health and wellness of caregivers.
